

eAxle

The modular eAxle drive system – compact, cost-attractive and efficient

Powertrain and electrified mobility

Up to
96%

efficiency for more range or, alternatively, a reduction in battery capacity thanks to the use of silicon carbide semiconductor technology

- High scalability (50–300 kW) and flexibility in scope of delivery for individual customer demands and all vehicle types
- Cost-attractive thanks to the integration of all components in one system housing
- Silicon carbide semiconductors enable the use of eAxles with 800V and, therefore, increase of performance or, alternatively, the downsizing of the electric motor

Even more
compactness

thanks to the integration of electric motor, power electronics and gearbox in one single system housing
